

Other services

ExtraGang is experienced in a wide variety of other computer-related services. We are experts in the Macintosh operating system as well as many common applications (Microsoft Office and Adobe Creative Suite – Photoshop, Illustrator, InDesign, Acrobat) as well as some not as common (Adobe InCopy, Adobe ImageReady, Acrobat Distiller, TextWrangler, Timbuktu). Should you need training or assistance with any of these applications, ExtraGang can help.

Further, we have supported in-house a full suite of of Internet applications running on Macintosh – including Apache, PHP, MySQL, BIND, Webmin, Postfix and EIMS – over the last five years. Problems crop up in Macintosh-based Internet server support because so few “experts” understand Apple’s implementation of standard, open applications. We at ExtraGang have been down that road many times and can help you navigate you way out safely.

Because we have a large internal network, we have supported a variety of routers, firewalls and wireless devices. We have the ability to install and help you support various types of networking devices in the small office/home office world and are especially adept at showing you how to make them work in Macintosh environments.

For any of your Macintosh computing needs, please don’t hesitate to contact us today.
